SUMMARY

Computer Science undergraduate at De La Salle University specializing in Software Technology with an interest focused on Natural Language Processing and Machine Learning, with 3+ semesters of hands-on experience shipping production features as a full-stack developer, plus applied NLP project work spanning rule-based systems and deep learning models.

EDUCATION

De La Salle University Manila

Sep 2023 – Aug 2027

BS in Computer Science, Software Technology | Minor in Financial Risk and Analytics

- Second Dean's Lister
- Relevant coursework: Machine Learning, Deep Learning, Software Engineering, Data Structures and Algorithms

WORK EXPERIENCE

Full-Stack Developer, *BetterInternship*

Sep 2025 – Apr 2026

- Redesigned the employer dashboard, job-posting flow, employer account management, and student application management used by 200+ employers, with a 50% reduction in tickets
- Built an in-site real-time messaging system between user types using PocketBase, enabling real-time communication for over 600+ users

Teaching Assistant, *STALGCM — Advanced Algorithms and Complexities*

Jan 2026 – Apr 2026

- Held consultation hours for ~40 students on automata theory topics, including DFA/NFA construction, pushdown automata, and Turing machines
- Graded problem sets and designed 5+ practice exercises on automata theory and complexity analysis for a class of ~40 students

Frontend Developer, *Team Vacaspec*

Jun 2025 – Aug 2025

- Collaborated with a team of 4 developers to build a website for managing event details, company employees, and assigned roles
- Shipped 15+ pages designed in Figma and implemented with HTML, CSS, and Handlebars; connected backend and database workflows to the frontend using JavaScript

PROJECTS

Tagabaybay — Orthographic Nativization for Filipino Loanwords

<https://github.com/Mango-Cats/tagabaybay>

- A rule-based rewrite cascade for orthographic nativization of English loanwords into Filipino, built in Rust, with Justin Ching, Zhean Ganituen, and Jaztin Jimenez

Salo-Salo — Multilingual Filipino G2P System with a Transformer Ensemble

<https://github.com/OutForMilks/Salo-Salo>

- A multilingual encoder-decoder Transformer ensemble for Filipino grapheme-to-phoneme conversion, built in Python and PyTorch, with Enrique Aragon, Stephen Borja, and Justin Ching

ProSched — OS Emulator

<https://github.com/zrvgan/cpp-os>

- A CLI-based OS emulator handling process scheduling and memory management, built in C++, with Stephen Borja, Zhean Ganituen, and Aaron Go

Tortilla — Lexical Substitution by Context

<https://github.com/chua-e/tortilla>

- A text suggestion system that recommends lexical substitutions per token based on surrounding context, with a fallback look-up system, in Python and TypeScript

TECHNICAL SKILLS

Languages: Python, Rust, TypeScript, JavaScript, Java, C/C++, R, SQL

Technologies: Git, HTML/CSS, Node.js, React, Tailwind CSS, Docker, PostgreSQL, MongoDB, Supabase, Figma

Environments: Windows and Linux
